

VDL Systems

Strength through co-operation

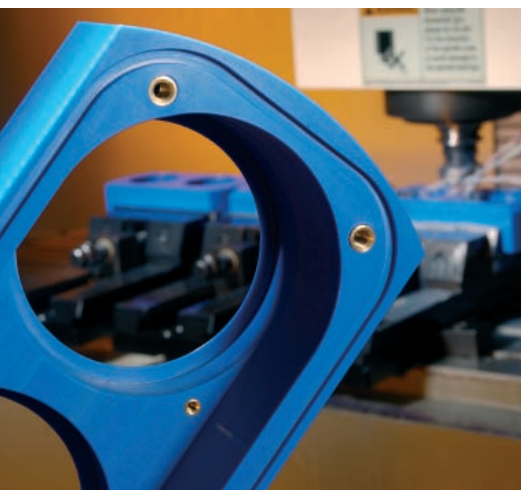

VDL Systems

LIKE NOBODY ELSE, YOU KNOW WHAT IS GOOD FOR YOUR PRODUCTION PROCESSES. LIKE NOBODY ELSE, WE KNOW HOW TO PRODUCE THE MACHINES, INSTALLATIONS AND SYSTEMS TO SUPPORT THESE PROCESSES. WE OFFER COMPLETE SOLUTIONS, BASED ON YOUR SPECIFICATIONS AND REQUIREMENTS, INCLUDING DESIGN AND ENGINEERING AS WELL AS CONSTRUCTION, INSTALLATION AND MAINTENANCE. WE ALSO PROVIDE SOLUTIONS WHICH FOR INSTANCE ONLY INCLUDE CONSTRUCTION AND INSTALLATION, OR WHICH ARE LIMITED TO MACHINE FRAMES.

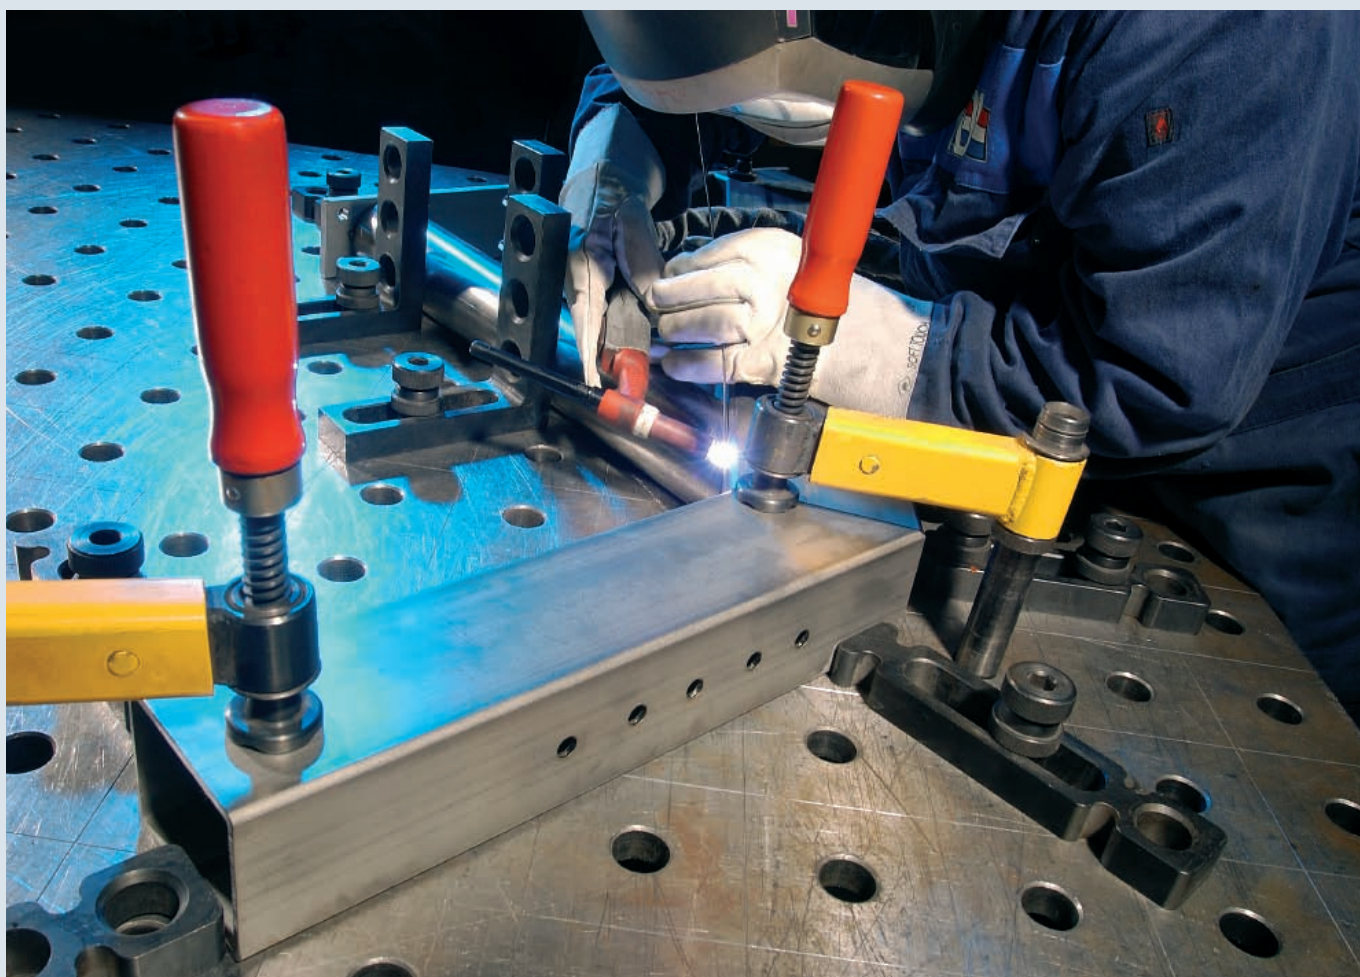

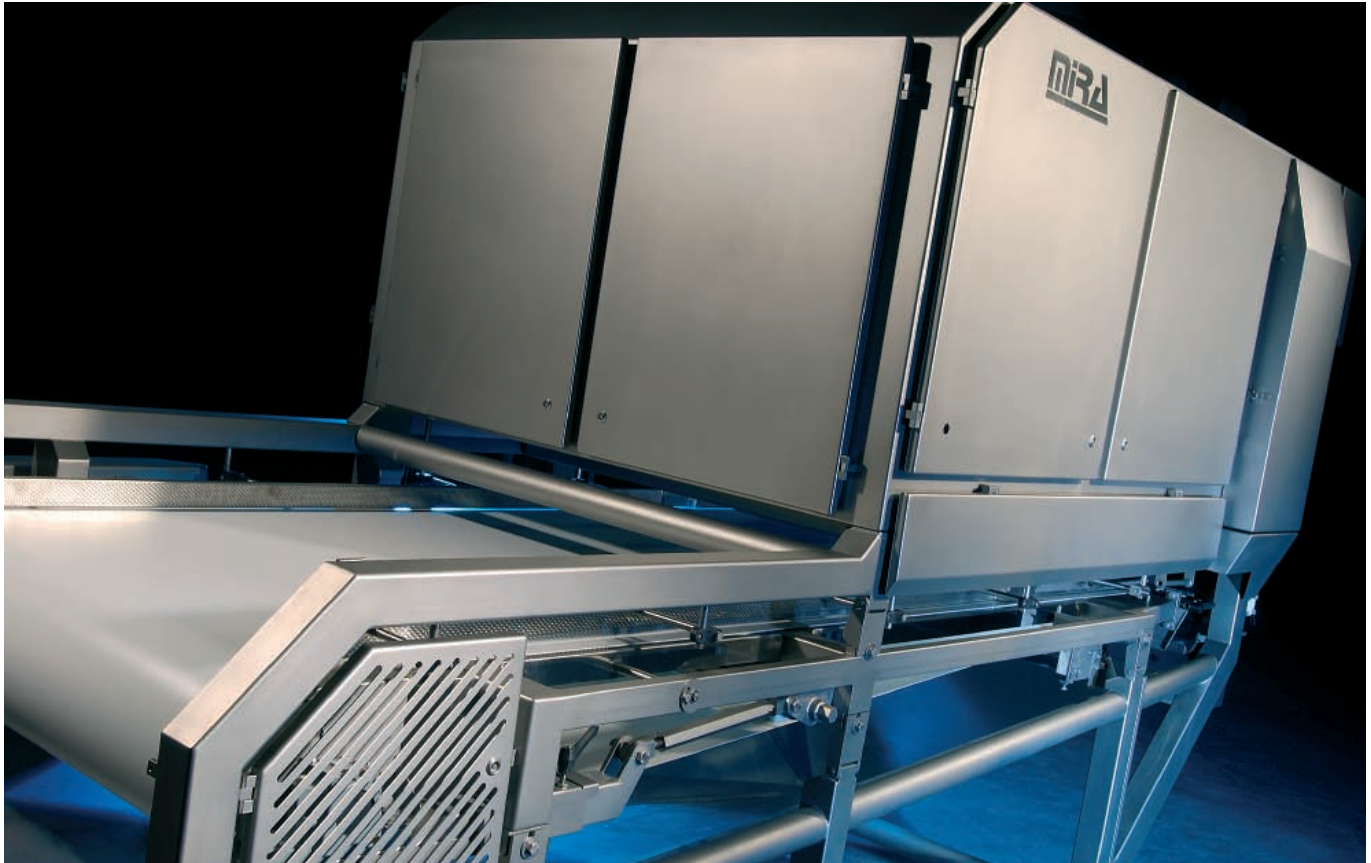

High quality is the only quality we know. Inventiveness, flexibility and reliable delivery are among our strongest points. With our know-how and experience we are able to add value to your designs and drawings. The result is always a practical optimisation of your production processes. Over the years, we have built up a special expertise in many different fields, from which all our clients can benefit.

BROADLY ORIENTED

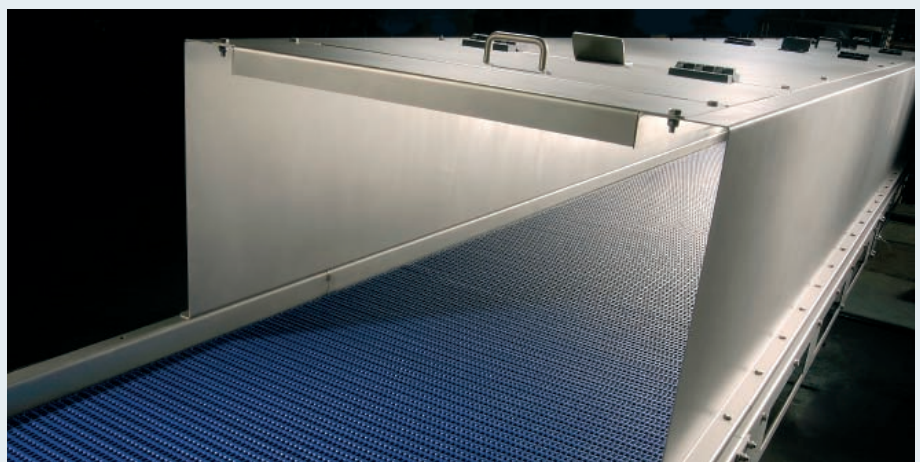

VDL Systems constructs complete machines, installations and internal transport systems in the form of modules. We are active in many branches and have developed various specialisations, for instance in the field of internal transport flows and high-quality installations for the food, chemical and pharmaceutical industries. Our expertise in stainless steel and aluminium has resulted in invitations for special projects. This often concerns complex constructional challenges, which involve a combination of stainless steel and mechanics.

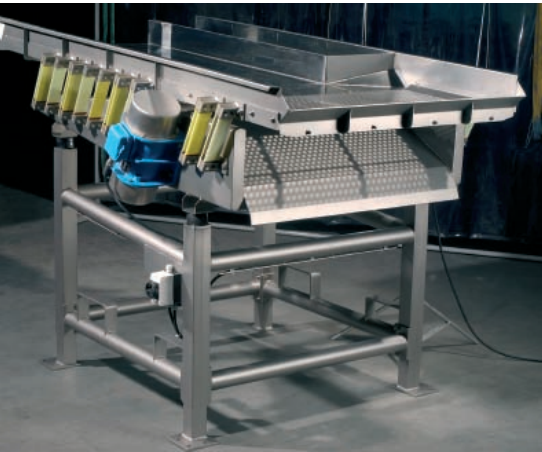

SINGLE ITEMS AND SERIES

We manufacture high-grade processing systems in both stainless steel and aluminium. Many products are produced as single items. In addition, we manufacture products in small and medium-sized series. Because we manufacture everything in-house, including sheet-metal working, machining, welding, assembly and ceramic blasting, we have perfect control over our lead times. As a result we contribute towards a minimum time-to-market. Our service department installs and maintains various systems for clients in Western Europe.

PROJECT APPROACH

For several of our clients we only work on a per project basis. They furnish the concepts and we supply the experts to turn these concepts into both cheap and practical solutions. Our ability is to design, engineer, construct, install and maintain such solutions. As a complete solution provider, we have gained ample experience in project-related thinking, costing and organising. We also carry out turnkey projects in cooperation with our associated specialist companies within the VDL Groep.

PROFILE

- Complete solutions for mechanical engineering and internal transport systems
- Efficient project management
- Single items, prototyping, zero series
- Small series
- Sheet-metal working
- Machining
- Welding
- Assembly
- Own blasting chamber

VDL Groep

VDL Systems is part of VDL Groep, an international company with approximately 7,300 employees, spread over 75 subsidiaries in 14 countries. The strength of the co-operation within VDL Groep offers added assurance in terms of continuity to customers and suppliers of VDL Systems alike. Furthermore, VDL Systems can always call on the collective expertise of VDL Groep and co-operate with its sister companies in the production of combined components.

VDL Systems is a supplier company. In the supply sector, VDL specialises in metalworking, plastics processing, system supply and surface treatment.

The other sectors comprise buses & coaches and finished products. The bus & coach division includes coaches, chassis modules, public transport buses, mini and midi buses. The finished products sector comprises suspension systems for the automotive industry, production automation systems, heating, cooling and air-technical systems, systems for the oil, gas & petrochemical industry, sunbeds and roof boxes, systems for the agricultural sector, cigar-making and packaging machines, container handling equipment, medical systems and production systems for optical media.
